

# FREE COMPOSTING WORKSHOPS

By composting, you can reduce your organic waste (kitchen and garden waste) by up to 40% or more! There are different ways to compost depending on your needs:

**Indoors:** With a vermicomposter (red worms not included), ideal for composting all year long.

**Outdoors:** With a traditional composter or a Green Cone digester, which eliminates food scraps and materials that are difficult to compost (without producing compost).

In 2025, the composting units sold during our workshops and throughout the year showed a very satisfactory usage rate within our community.

Workshop participants will benefit from reduced prices on composting units. They will also receive flower seeds and have the chance to win a free composting unit in a draw.

Join us to learn how to compost easily, reduce your waste, and take a meaningful action for the environment!

## Alnwick *(two sessions)*

**Date:** Thursday, April 30, 2026
